

# UMUBAJI NEWS #1

**proWOOD**  
promoting competence  
in wood technology

The **Carpentry Instructor program (MIC)** started with the first training module on 15<sup>th</sup> August. We've been very happy to be able to welcome 17 female and male candidates from companies and TVET institutions after the application and selection process of applicants.

in a first 2-week competence-based training in May 2022 focus was placed on the planning and production of an office furniture set including office tables, cupboards, chairs, and a conference table. The production process has been performed and reflected together with trainers and students from Rubengera TVET under supervision of the **proWOOD** trainer team.

Starting point for the joint activities has been a planning workshop with **proWOOD** partners at Rubengera/ Karongi in March 2022. Detailed plans have been developed to initiate with a baseline study in the Western Province, we planned a series of demand-oriented trainings as well as two international accredited training programs for carpentry instructors and for CNC operators. A round table for sector stakeholders has already been successfully established (June 2022)

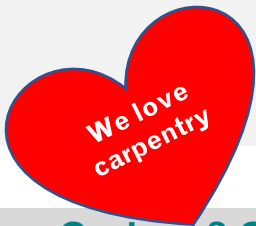

## Pinboard- for trainings & events
